

WM to Ferche Cross-reference List

VERSION 1

Below is a cross reference sheet for WM to Ferche. These Profile matches are NOT exact matches to WM due to the fiber of softwood. The softwood fiber requires a thicker profile to obtain integrity. Hardwoods can maintain integrity and be manufactured from thinner lumber while meeting the design criteria. This cross reference should only be used as a close proximity and not be used as an exact match to WM especially on a existing job or project where existing mouldings already exist. Ferche assumes no liability regarding the exactness of the match due to the multitudes of variations in the marketplace.
